

# Super-Flex EL8 Series Material Loaders

Modular Dust Free Material Loading for Plastic Resins

- Goretex bag filter
- Load dusty materials without leaks
- Industrial PLC Control
- EZ-Clamp Assembly
- Clamp-on Hose for easy access
- 2 and 4 HP motors available
- Heavy duty stainless steel
- Polished inside and out
- ISO 2852 / Class 3A Finish
- Rated up to 500 pounds per hour

**Dust Free Loading of even the most difficult materials.**

The secret is a Goretex felt bag typically used in powder loaders. We do not use seams to mount filters so our loaders never leak dust. All of our seams are machined stainless steel with molded gaskets that meet medical and pharmaceutical standards.

EL8 series Loaders come standard with industrial PLC controls to provide adjustment of load time, two material proportioning and filter cleaning.

You will find the polished stainless steel design virtually self-cleaning. In fact in most application there is no need to take off the lid and clean between different jobs.

**A Goretex Coated Bag Filter reduces maintenance and conveys dusty materials.**

Our high efficiency bag filter is similar to those found in high end powder loaders. The combination of a bag filter and our gasket sealed flanges make the EL8 series loaders able to handle difficult materials without any leaks or dust. We can even comply with clean room standards. How often the filter is cleaned is easily adjusted with the standard PLC Control.

**Add a two material proportioning valve to your loader at any time**

The standard PLC Control includes control of a two material proportioning valve. Just buy the valve at any time and you are ready for loading of two materials. You can set the proportion and the number of layers for improved mixing. The stainless steel proportioning valve is easy to disassemble and clean. The proportioning valve can be easily moved from machine to machine so you can only buy the number of valves you need.

**Glass Tube Hopper for “Just In Time” Loading with great visibility.**

Your EL8 loader can clamp onto a glass tube hopper for ease of maintenance and flexibility. As part of the Super-Flex interchangeable Resin System you change out components or add a dryer or color feeder as needed.

Our Glass tube hoppers are the only ones available with class 3A stainless steel construction and high temperature glass. You will see and feel a quality difference. The polished surfaces make them virtually self-cleaning reducing changeover and maintenance time.

The EL8 is compatible with our 4 and 6 inch glass tube hoppers with a capacity of 1 and 8 pounds at 35 pounds per cubic foot.
