

# Super-Flex Dryers

## Energy Efficient Drying of Plastic Resins

- Heavy Duty stainless Steel
- ISO 2858 Sanitary Compliant
- Easy Clamp Assembly
- Solid State Controls
- Pressure Switch
- Optional Loaders Available
- Optional Compressed Air Dryers
- 5 Year Warranty

**Super-Flex Systems are the first Loading, Coloring and Drying Systems that are ISO 2828 Sanitary Compliant.**

Although they are ready for a clean room they are economical and will fit into any budget. Super-Flex Dryers are constructed of Stainless Steel with machined ferules and clamps for easy access. The filter can be cleaned during operation and is within normal reach. The Heavy Duty design is durable and will not flex or wobble during operation.

Super-Flex Dryers are extremely energy efficient. In most applications they will dry with standard plant air. If dryer air is required there are many options for compressed air dryers including using multiple dryers on a single compressed air dryer.

The solid-state controls are simple to operate. They include a compressed air pressure switch to protect the heaters from damage.

The quick clamp system makes maintenance a snap while providing a firm wobble free loader.

## Innovative Solutions For Injection Molders
